

Leo Deng was scared of being sunburned while cross country practice, so I designed this sun protection device, which blocked 100 percent of UV lights from reaching the skin.

The design is cardboard wrapped around the forearm, and the design is only holded through one strong tape, so it is able to handle the cross country intensity.

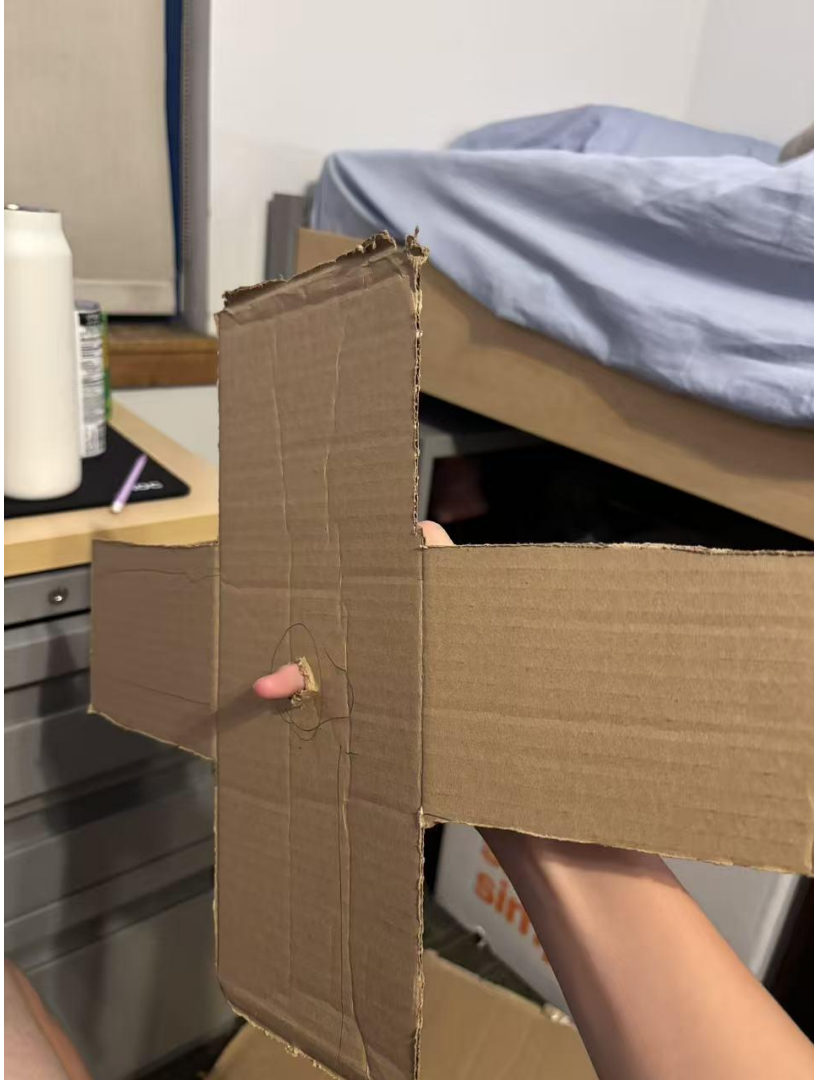

Bruce Lacked a showering shoe.
Everytime when he wears his crocs to
shower water piles up inside his shoe and
made him uncomfortable.

Therefore I designed this specialized
showering shoe. The surface of the insole
is flat, so water will not pile inside. The
front end is also open, so water can flow
out. I also designed small holes for water
to flow in and evaporates.

Teenagers now are becoming “Phonagers”, as they spend more time on their phone rather than socializing with real world friends.

I designed this phone locker to completely block teenagers from accessing the phone. The tape holds the phone holder together, so there will be extremely difficult to take out the phone once put in.

As Social temperature reached historical peak, cooling device is deeply needed throughout the market.

I designed this portable fan, which you can put it onto one of your finger and you can spin it manually turning the fan blades.
